

Anti Grazing Protection Fencing Specification Sheet

Anti Grazing Protection Fencing is a high strength, yet lightweight, heavy duty plastic alternative to galvanised hexagonal netting and welded mesh fencing. Manufactured from polypropylene it is UV stabilised, chemical resistant and will retain its appearance for many years with little or no maintenance. Because of the built in memory of polymer structures, the fencing will quickly resume its natural shape if knocked or crushed.

Our primary use for the anti grazing protection netting is to help protect newly planted areas from wildfowl grazing. This gives the plants time to establish themselves in their new environment.

Specification:

Roll size:	1m x 50m
	2m x 50m
Weight:	200g/m ²
Colour/Material:	Silver/HDPE
Mesh size:	44mm x 33mm
