

# Nesting Boxes Specification Sheet

We are pleased to present an extensive range of wildlife products to enhance creation of diversity in a wide range of habitats. Wherever possible we use a mix of good quality locally sourced materials from regenerative & sensibly managed resources & up-cycled/reclaimed materials that provide strong, safe & well designed products that suit a large range of species needs.

## **Importance of nest-boxes to wildlife:**

The type & variety of nest & roosting habitat boxes to be sited specially for each species is almost inexhaustible, as many wild birds, mammals, reptiles/amphibians & insects will accommodate many forms of shelter & breeding sites....even beyond the target species habitats have been provided. For example both Blue, Coal & Marsh Tits have been observed adopting Dormouse boxes in the field. This makes it obvious that due to, a too tidy approach to garden, estate & woodland management & the compounding factor significant storms from 1987-present many natural sites formed by natural hollows have disappeared.... Transversely it is found that more often than not Dormice & other woodland mammals will take up residents in Bird Nest-boxes! A pleasant surprise to say the least, to inadvertently provide great habitats for so many different species!

Please ask about the species you hope to attract & we will do our best to provide a good range of quality nest sites.

## **On-site survey and installation:**

To maximise the attraction of species & success of breeding & roosting in the sites provided, we offer a very successful site visitation service to access the existing habitat, giving a brief written report with suggestions to any improvement & enrichment actions that could be made to benefit the site.

Siting Nest & Roost Boxes in the correct position brings a much higher rate for adoption & success, please ask for details on this service.
